ServerSocket Programming

MyServer.java

```
import java.io.*;
import java.net.*;
public class MyServer {
   public static void main(String[] args) {
      try (ServerSocket ss = new ServerSocket(6666)) {
         System.out.println(
            "Server started. Waiting for connections..."
         );
         while (true) {
            try (
               Socket s = ss.accept();
               DataInputStream dis =
                  new DataInputStream(s.getInputStream())
            ) {
               String str = dis.readUTF();
               System.out.println("Message= " + str);
            } catch (IOException ioe) {
               ioe.printStackTrace();
            }
         }
      } catch (Exception e) {
         e.printStackTrace();
      }
   }}
```

Myclient.java

```
import java.io.*;
import java.net.*;

public class MyClient {
   public static void main(String[] args) {
      try (
            Socket s = new Socket("localhost", 6666);
            DataOutputStream dout = new DataOutputStream(s.getOutputStream())) {
         dout.writeUTF("Hello Aayush");
         dout.flush();

         System.out.println("Message sent: Hello Aayush");

      } catch (Exception e) {
         System.out.println(e);
      }
   }
}
```
