MyServer.java

```
import java.io.*;
import java.net.*;

public class MyServer {
    public static void main(String[] args) throws Exception {
        ServerSocket ss = new ServerSocket(5000);
        System.out.println("Server waiting for client...");

        Socket s = ss.accept();
        System.out.println("Client connected!");

        BufferedReader in = new BufferedReader(
            new InputStreamReader(s.getInputStream()));

        String msg;
        while ((msg = in.readLine()) != null) {
            if (msg.equalsIgnoreCase("exit")) {
                System.out.println("Client disconnected.");
                break;
            }
            System.out.println("Client: " + msg);
        }

        s.close();
        ss.close();
    }
}
```

MyClient.java

```
import java.io.*;
import java.net.*;

public class MyClient {
    public static void main(String[] args) throws Exception {
        Socket s = new Socket("localhost", 5000);
        System.out.println("Connected to server!");

        BufferedReader keyboard = new BufferedReader(
            new InputStreamReader(System.in));

        PrintWriter out = new PrintWriter(
            s.getOutputStream(), true);

        String msg;
        while (true) {
            System.out.print("Enter message: ");
            msg = keyboard.readLine();

            out.println(msg);

            if (msg.equalsIgnoreCase("exit"))
                break;
        }

        s.close();
    }
}
```
