```c
#include <stdio.h>

int main() {
    int n, i, sum = 0, data[20], checksum;

    printf("Enter number of data words: ");
    scanf("%d", &n);

    printf("Enter 8-bit data words (decimal values 0-255):\n");
    for (i = 0; i < n; i++) {
        scanf("%d", &data[i]);
        sum += data[i];
    }

    while (sum > 255)
        sum = (sum & 255) + (sum >> 8);

    checksum = (~sum) & 255;

    printf("Checksum: %d\n", checksum);

    sum += checksum;
    while (sum > 255)
        sum = (sum & 255) + (sum >> 8);

    printf("Enter received checksum: ");
    scanf("%d", &checksum);

    sum = 0;
    for (i = 0; i < n; i++)
        sum += data[i];
    sum += checksum;

    while (sum > 255)
        sum = (sum & 255) + (sum >> 8);

    if (sum == 255)
        printf("No error detected.\n");
    else
        printf("Error detected.\n");

    return 0;
}
```

Note: Enter decimal values between 0 and 255. For verification, enter the checksum received along with the data.
